CONTENTS

The main directions of improving the quality of educational services of higher education institutions	11
Karashchuk V. O.	11
Economic potential of industrial enterprises, factors affecting it and directions for its increase	13
Karimova G. I. qizi	13
Modern information technologies: a means of activating educational and cognitive activity	17
Karpenko R. V.	17
Development of general competencies during the study of specialized medical disciplines by future doctors	21
Karpenko Yu. P.	21
Time management and goal-setting in informal education in the conditions of digitalization	24
Karpova O. O.	24
Modern approaches to the training of bachelors in the field of tourism in the context of digitalization of the economy	27
Kashyna G.	27
The role of education in the development of the digital economy	31
Kyrchata I. M.	31
Consulting in conditions of uncertainty	33
Kyslytsia I. O., Volovyk I. A.	33
Using of ICT in the training of future foreign language teachers	36
Klieba A. I., Nechyporenko M. O.	36
Information security of information protection activities	39
Klimovych S. O., Pushtaryk O. S.	39
Study of structure formation of high chromium alloys with computer analysis	42
Klochko O. Yu., Voronov O. S.	42
Factors of future managers' social and professional adaptation to the working environment	47
Koval M. S., Lytvyn A. V., Rudenko L. A.	47

Global trends in solving the problems of agricultural education as a factor in the sustainable development of communities and rural areas	
Kovalchuk I. V.	51
Information technology as a method of learning in higher education	
Kovban A.	55
Online compiler «Replit» usage during the study of the programming discipline	
Kovtaniuk M. S.	60
Neural networks: basic provisions	
Kodirov E. S.	62
Digital tools in higher education	
Kodola R. M., Smirnova O. I.	73
Information models of research development in higher educational institutions	
Kozlovskiy Y. M., Stehkevych O. O., Stehkevych L. K.	77
New administrative and resource opportunities for implementing information and communication technologies in the Ukrainian economy	
Kolodiychuk A. V.	81
Improving organizational and economic mechanisms for managing human capital in the digital economy	
Komolov S. Kh., Sattarova Kh. B., Gaibnazarova Z. T.	86
Use of information technologies in higher education: problems and prospects	
Kononenko L. V., Kononenko S. O.	97
Using remote technologies during classes: lms moodle, google classroom	
Kopilets L. O., Alieksieieva G. M., Horbatiuk L. V.	101
Use of computer technologies in the educational process	
Korinchak L. M.	106
Students competencies formation's qualimetry of higher education institutions in the knowledge quality assessment system	
Korobovych L. P.	110
Analysis of interactive methods of teaching informatics to students of general secondary education institutions	
Kosovets O. P., Shuliak Yu. S.	114

Modern information technology in foreign language teaching Kosovykh O. V.	119
Research on the possibilities of IT for countering public disinformation Kotlykhova L. D.	122
The essence of effective management and its importance in the management of organizations Qo'chqorova R. A., Rustamov D. R. son	124
Specifics of the educational process management on the basis of a systematic approach Kosheleva N. G.	131
Ensuring the human right to privacy when using information technologies (for example, the Internet) Kravchuk S. M.	136
Internet marketing at the present stage structural changes in the national economy Kramskyi S. O.	139
Usage of information technologies for ensuring practical orientation of educational process for training lawyers Krasytska L. V.	144
The use of computer-oriented methodological systems for teaching mathematical disciplines at the pedagogical university Krasnozhon O. B., Matsiuk V. V.	148
Methods of teaching programming and IT Kryvonos O. M., Kryvonos M. P.	151
Separate issues of the development of organizational and legal principles of management and modernization of the management system of higher education institutions Kryvoruchko L. S.	156
Use of the Go-Lab cloud service for the formation of research competence Kryvoruchko I. I.	160
Application of information technologies during the training of specialists for bodies of the National Police of Ukraine Kryzhna V. V.	163

Application of signs of functioning of systems built according to the OSI model for solving technical diagnostics problems Kuzavkov V. V., Bolotiuk Yu. V.	167
Micro-credentials as an innovative tool of modern higher education Kuznetsova N. B.	171
2020 was an important year for Uzbekistan in the development of the ICT sector Kukieva S. S., Akhunova D.	176
Multimedia as a learning tool at the Maritime English lesson Kulikova I. Yu.	180
Implementation of distance education in inappropriate conditions at Mykolaiv National Agrarian University Kurepin V. N.	183
Transformation of the education system as a catalyst for innovation in modern China Kurpayanidi K. I.	187
The role of digital economy in modern business management Kuchkorova D.	191
Use of KPI system (key performance indicator system) in effective management of employees Kuchkorova R., Rustamov D.	197
Using of innovative technologies to teaching the criminal-legal cycle disciplines at the Zaporizhzhia National University Larkin M. A.	201
The use of information and communication technologies in the process of teaching economic profile disciplines in higher education institutions of Ukraine Lysenko A. M.	204
Theoretical principles of application information technologies in the educational process Lysenko N. V.	208
Databases in the structure of the National Police of Ukraine Lytvynenko O. G., Omarova K.	212

Risks and threats to children in the digital environment as a subject of criminological research	
Lubenets I. H.	216
Designing a help system for detecting PC malfunctions and receiving advice on their elimination	
Lubko D. V.	220
Implementation of information technologies in scientific and research work of students at non-philological departments in English language classes	
Lukianova H. V.	225
Mechanisms of cryptographic protection during user authentication in data transmission systems	
Lukina K. V.	229
Theoretical and practical aspects of the use of information technology in pedagogical education	
Lutfillaev M. X., Suyumov J. Yu.	233
Material and technical support of the activities of subjects in the field of information relations	
Liublin V. D.	236
Peculiarities of the use of IT in teaching foreign languages in a higher educational institution of Ukraine	
Liulka V. M., Tarasova N. I.	239
Automation of the staff list of scientific and teaching employees	
Lyashenko O. B.	243
Features of electricity demand forecasting for the "Education" section as a link of the budget sphere of the economy with an estimate of the amount of electricity savings	
Maistrenko N. Yu.	246
The influence of innovative technologies on the efficiency of the customs authorities of Ukraine	
Makarova S. O.	251
Features of the safe use of information technologies, taking into account the age category	
Maksymenko Yu. B., Matokhniuk L. A.	253
Google digital tools in the activity of the lecturer	
Maksymchuk A. V., Maksymchuk D. S.	257

Management in education	
Mamajonov F.	259
Methods of modeling processes in the management system	
Mamajonova Z. B. kizi, Boltabayeva Sh. Sh. kizi	262
The Japanese experience of anti-monopoly policy and development of competition	
Mamajonova D. V.	267
The use of information and communication technologies in the study of the French language	
Mamosiuk O. S.	272
Management in forensic expert activity	
Martynenko N. V.	277
Jetpack Compose: new approaches to Android UI development	
Marchenko S.	281
Low-complexity LIDAR Point Cloud Filtering Method for Self-driving Vehicles	
Matvienko V. T., Mushta I. A.	284
Problems faced by women-entrepreneurs in Uzbekistan

USE OF THE GO-LAB CLOUD SERVICE FOR THE FORMATION OF RESEARCH COMPETENCE

Kryvoruchko I. I.

*Teacher of the Department of Informatics
and Information and Communication Technologies
Pavlo Tychyna Uman State Pedagogical University
Uman, Ukraine*

High-quality training of teachers in general and informatics in particular is a requirement of the modern information society. There is a growing need for the training of informatics teachers who are able to navigate well in the changing information space, be "on the wave" of educational and scientific innovations, are ready to creatively apply the acquired knowledge and skills in pedagogical activities, strive for professional and personal self-development and self-realization, have critical thinking skills, are prepared for the organization of cognitive research activities and cooperation, take an active research position.

Natural and man-made calamities, which have recently disturbed Ukraine, pose new challenges to modern education. That is why it is timely to train future informatics teachers who are able to independently conduct research and organize students' research activities, arouse their interest in research and encourage participation in research activities by their own example. This trend actualizes the modernization of approaches to the professional training of future informatics teachers, one of the goals of which is the formation of their research competence.

The analysis of modern research made it possible to find out that research competence in various aspects was considered in their works by modern domestic and foreign scientists, in particular O. Antonova, O. Babkova, O. Budnyk, O. Vashulenko, Yu. Volynets, S. Wongwanich, T. Timofeeva, D. Traiwicithkun, I. Tyagai, L. Udompong, O. Khomenko and others.

The standards of the New Ukrainian School [1] are based on the "Recommendations of the European Parliament and the Council of Europe on the formation of key competences of lifelong education", but will not be limited to them. Unlike the Recommendations, which define 8 groups of competences, NUS contains 10 key competences: communication in the state (and native, if different) languages; communication in foreign

languages; mathematical competence; basic competences in natural sciences and technologies; information and digital competence; the ability to learn throughout life; initiative and entrepreneurship; social and civic competence; awareness and self-expression in the field of culture; environmental literacy and healthy life. These competencies are interrelated, equally important, acquired during the study of various subjects at all stages of education and contain common skills, in particular:

- the ability to read and understand what is read;
- the ability to express an opinion;
- orally and in writing;
- critical thinking;
- the ability to logically justify a position;
- show initiative;
- to create;
- ability to solve problems, assess risks and make decisions;
- the ability to constructively manage emotions;
- apply emotional intelligence;
- the ability to cooperate in a team [2].

In order for the student of education to master the specified skills and be able to realize himself, a specialist is needed who possesses these competencies and will help in their acquisition. One of the main tasks of a teacher, in particular of informatics, is the formation of the research competence of the student, which will contribute to the mastery of key competences.

In the conditions of distance learning, it is cloud services that help in the formation of research competence. In particular, the Go-Lab platform.

The Go-Lab ecosystem is an educational platform for distance and blended learning of STEAM subjects [3], which today contains the largest collection of virtual / remote laboratories, more than a thousand exploratory learning environments (ILS), as well as educational programs and tools (Fig. 1).

Fig. 1. The Go-Lab ecosystem

The educational platform provides for the use of its tools both directly in the classroom and in the conditions of distance (mixed) learning

The Go-Lab ecosystem enables various forms of digital communication – synchronous and asynchronous communication in virtual space when solving educational tasks.

Thus, the use of the Go-Lab cloud service helps to form research competence, which is a holistic, integrative quality of the individual and combines knowledge, abilities, skills, experience of the researcher, value attitudes and personal qualities and is manifested in the readiness and ability to carry out research activities through research training for the purpose of obtaining new knowledge through the application of methods of scientific knowledge, the use of a creative approach in goal setting, planning, decision-making, analysis and evaluation of the results of research activities. The use of cloud services helps to form research competence in the conditions of distance learning.

Наразі інформаційні технології набули поширення в усіх сферах людської діяльності. Виникла й стрімко розвивається потужна індустрія отримання, систематизації та поширення інформації. Кількість працівників в інформаційному секторі у більшості країн світу неухильно збільшується. Інформація набуває значення одного з найбільш затребуваних державних ресурсів.

Суттєві зміни відбуваються і в діяльності правоохоронних органів. Зокрема на основі інформаційних технологій упроваджуються потужні інформаційно-пошукові системи, удосконалюється система управління та інформаційно-аналітичного забезпечення Національної поліції, розробляються нові методи збирання й аналізу інформації, розширюються можливості спеціальних технічних засобів тощо. Водночас сучасними інформаційними технологіями оснащується й кримінальне середовище [1].
